

MITHESH R MOHAN

Computer Science & Engineering Undergraduate

+91 9074073721 | mitheshrmohan05@gmail.com | linkedin.com/in/mithesh-r-mohan | github.com/Mithesh-R-Mohan

EDUCATION

Bachelor of Technology in Computer Science & Engineering

08/2023 – 06/2027

VIT Bhopal University | Specialization in Cyber Security and Digital Forensics

- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Computer Networks, Operating Systems, Software Engineering.

Higher Secondary Education (12th Standard - PCM)

05/2022 – 03/2023

Lakshmi Narayana Vidyanikethan

SKILLS

- **Programming Languages:** Python, C++ (OOP & Core Basics), SQL (MySQL)
- **Frameworks & Libraries:** React (Basic Frontend Integration), Scikit-learn (Applied Basics), Tkinter
- **Developer Tools:** Git, GitHub, SQLite
- **Core Concepts:** Object-Oriented Programming (OOP), Data Structures & Algorithms, Relational Databases

PROJECTS

Real-Time Phishing URL Detection System (Edge Monitor)

Python, Scikit-learn, Tkinter

Core Developer | <https://github.com/Mithesh-R-Mohan/Phishing-Detection-System>

- Engineered an automated desktop security tool that monitors live web activity by reading new entries directly from Microsoft Edge's local SQLite history database without interfering with active user browsing sessions.
- Built an automated lexical analysis pipeline extracting key URL structural properties including length, delimiter counts (dots, slashes, hyphens), numerical ratios, HTTPS protocol verification, and sensitive authentication keywords.
- Trained a Random Forest classifier using Scikit-learn on verified malicious and benign URL datasets, reaching an overall detection accuracy of 94% with balanced Precision and Recall to minimize false alarms on benign domains.
- Evaluated system performance using Scikit-learn metrics (Confusion Matrix, F1-score) and latency timers, verifying that feature extraction and classification complete with an average response time of under 350ms.
- Designed an intuitive desktop graphical user interface using Tkinter to render live status indicators, detection history tables, and evaluation metrics in real time.

MUSE - Movie Soundtrack Search Platform

React, REST API

Frontend Contributor | <https://github.com/venti-latte-maker/Muse>

- Contributed to the user interface of a movie soundtrack search application built with React, focusing on developing clean, modular page components for search inputs and dynamic result cards.
- Integrated frontend views with backend REST API endpoints to consume structured movie metadata, display song lists, and populate external media links dynamically on user query.
- Implemented responsive UI layouts and component states to handle search transitions, active loading indicators, and graceful error messages when queries returned empty or invalid results.
- Tested component rendering behavior and API data bindings across multiple screen viewports using browser developer tools to verify consistent layout alignment and error-free network calls.
- Collaborated using Git and GitHub for version control, tracking feature branches, and managing codebase updates through clean commits.

CERTIFICATIONS & TRAINING

- **Mastering Data Structures and Algorithms using Python** – Udemy
- **AWS Technical Essentials** – AWS
- **Official Practice Question Set: AWS Certified Cloud Practitioner (CLF-C02)** – AWS
- **The Bits and Bytes of Computer Networking** – Google Coursera
- **Introduction to C++** – Simplilearn
